

MAINTENANCE INSTRUCTION

Do not wash the film for 30 days after the installation. Visual changes during this time period are a natural part of the bonding process.

Depending on the product, it may take up to 60 days for the film to fully cure. Small water dimples will diminish and eventually disappear.

FOR BEST CLEANING RESULTS, use a mild detergent solution or a commercial window cleaner such as Glass Plus or Windex. You can use a chamois, soft paper towel, soft cloth and rubber squeegee. A window washer's lamb wool cloth can also be used. Even though the film is scratch resistant, it is not scratch proof.

WE DO NOT RECOMMEND USING A BRUSH, ABRASIVE TYPE SPONGE, STRAIGHT AMMONIA, ALCOHOL OR ANY TYPE OF ABRASIVE CLEANER SUCH AS AJAX, or COMET.
